TRADE CATALOGUE

ECO-STRAW

Our Mission

Our mission is to provide **GREEN SOLUTIONS** to our customers innovating and educating through supply of sustainable eco-friendly products that provide **ONE SMALL CHANGE** from every customer, in turn making **ONE BIG DIFFERENCE** to our planet.

How We Are Achieving This

Responsibly Sourced Wood and Paper

At Bygreen our wood products are FSC® (Forest Stewardship Council®) 100% wood from well managed forests, and our bamboo products are FSC® 100% bamboo from well managed forests.

Our paper straws are FSC® MIX of paper from responsible sources. FSC® certification FSC®-C146985.

Industrially Compostable

Our "Eco-Straw" PLA (Poly Lactic Acid) Straws and Bygreen CPLA cutlery have all been tested and meet the Vincott "OK TO COMPOST" tick of approval. They can be industrially composted where facilities exist in Australia.

OXO-Biodegradable

Our "Eco-Straw" OXO-BIODEGRADABLE straws meet ASTM D6954-04(2013) American standard grade for exposing and testing; Plastics that degrade in the environment by a combination of oxidation and biodegradation.

Reduce and Reuse

One of the best ways to help REDUCE single use plastics and reduce landfill, is to REUSE. Our "Go Green Reusables" are high quality products consisting of cups, bottles, straws and we have more to come. It's easy to go green with Bygreen.

Bygreen has been committed to providing the Australian market with quality products and for over 30 years. Our brands are industry leaders and are well known for their high quality, unique design and we are continually looking to further improve our packaging and products as we move into the future.

BYGREEN'S SOLUTION

WASTE MANAGEMENT HEIRACHY

The Australian Government have announced that by 2025, all packaging in Australia must be
100% Recyclable
100% Compostable
100% Reusable

Consumption of plastic has increased exponentially. While plastic and packaging recycling in Australia is well established, only 14 per cent of plastic is recovered for recycling or energy recovery.

Here at **Bygreen** we have already taken steps towards this by changing our packaging to eco-friendly options like our paper straws which are now packaged in cardboard dispenser packs.

REDUCE

Does your product need to be packaged as it currently is? Bygreen have reduced overall packaging where possible.

REUSE

Choose reusable products like these stainless steel cups, bottles and straws.

RECYCLE COMPOST

Recycle our cardboard packaging and boxes. Plastic wrap can also be recycled.

RECOVER

To waste energy

DISPOSE OF LANDFILL

Last Resort

WE GIVE BACK

GUARDIANS OF GREEN

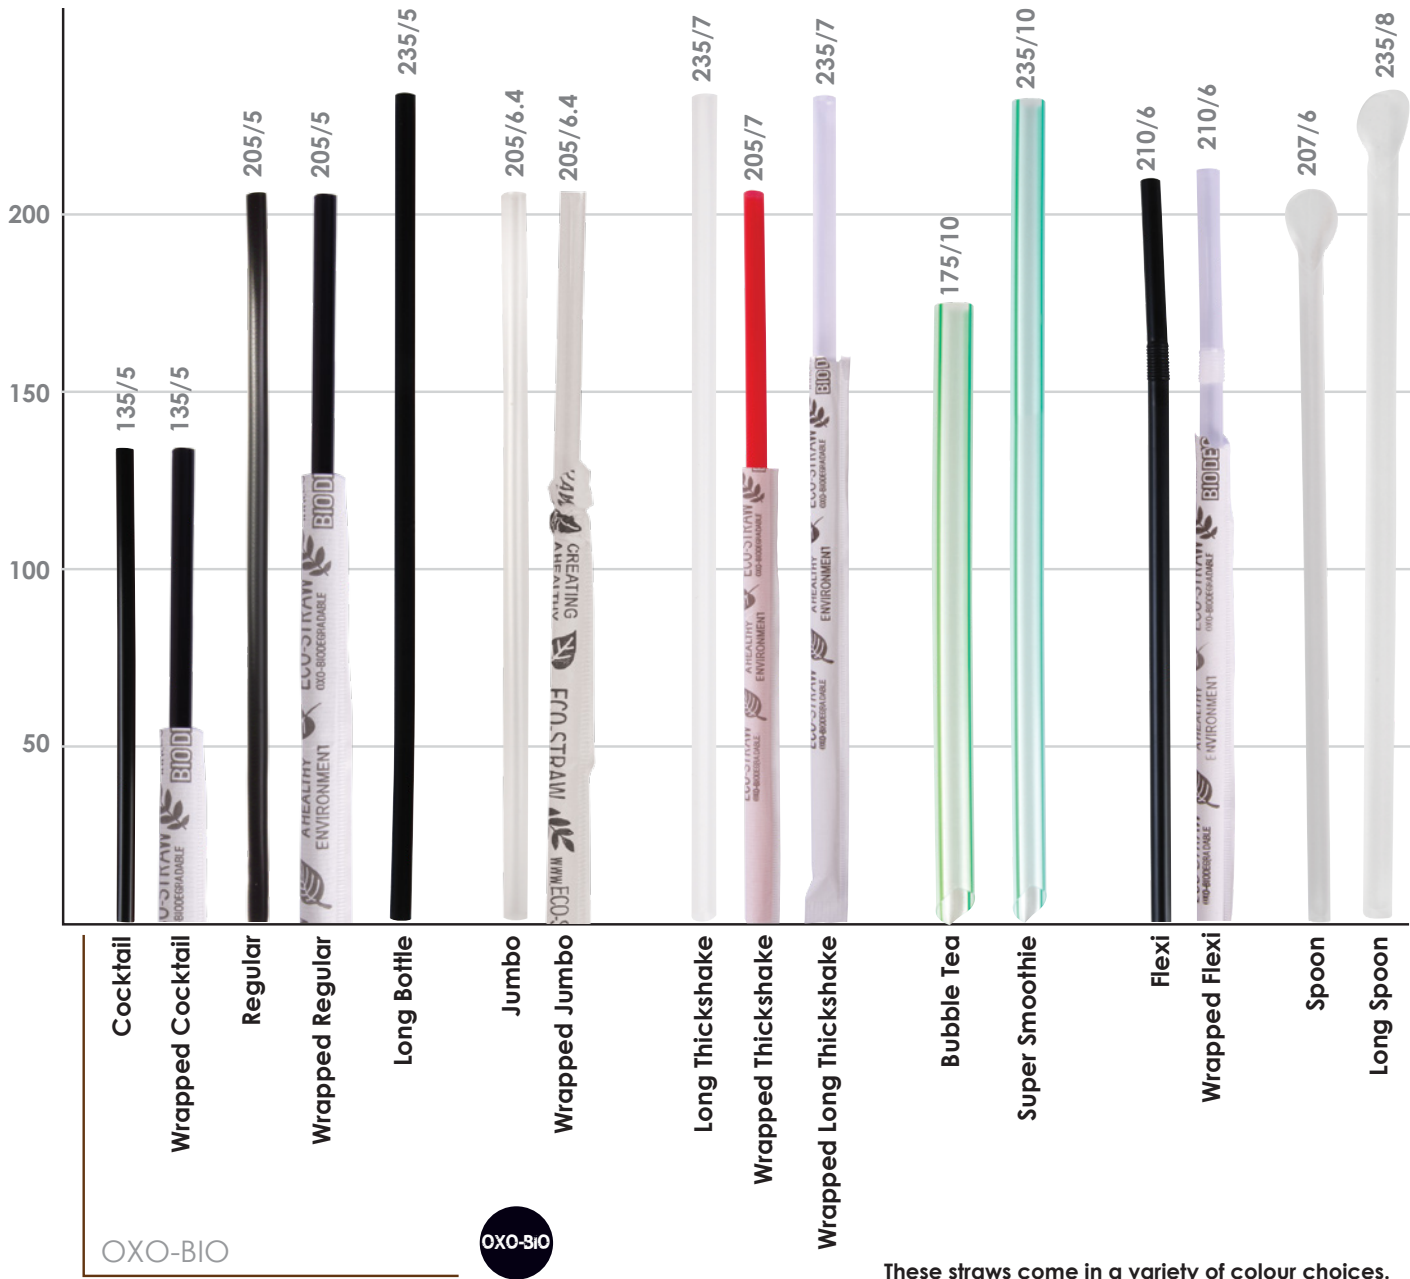

We have recently set up our "Guardians of Green" program and are looking to support charities and groups in need to further protect our beautiful planet and it's people.

By supporting the Bygreen Product Range, you are also supporting the many valued groups, individuals & organisations featured within our "Guardians of Green" program.

For more info on our program please visit
www.guardiansofgreen.com.au

OXO-BIODEGRADABLE STRAWS

FDA CERTIFIED

ECO-STRAW

A Plastic Straw with the additive "Reverte[®]" which alters the molecular structure of the plastic. Approximate lifespan of 18 months after its useful life.

After an initial 48 hours of sunlight, and exposure to oxygen, the straw will begin to degrade, eventually become brittle, slowly breaking down to where it can be then be attacked in a micro-biological form, eventually degrading to CO₂ and Biomass.

If this straw finds it way into an open environment, this is where its degradable properties work well. Our OXO-BIO Eco-Straws meet standards for exposing and testing plastics that degrade by a combination of Oxidisation and Biodegradation.

These straws take longer to break down compared to PLA or Paper and therefore cannot be claimed as a commercially compostable straw, however once fully broken down, meets the same eco-toxicity standards as Tier 3 - Ecotoxicity in the standard EN13432. The plastic, now biomass and CO₂ poses no threat to the earth, once fully broken down.

Tier 2 – Biodegradability,
Tier 3 – Eco-toxicity EN13432 – Ecotoxicity (Only);
- USA and EU FDA approvals For Plastics coming into contact with Food.

PLA STRAWS

Made from plants not plastic

FDA CERTIFIED

A great alternative to plastic straws, made from plants (PLA) Poly Lactic Acid.

A compostable and biodegradable solution in an industrial composting facility, PLA straws may offer some users a better touch and feel than paper straws.

We are proud to offer a range of straws in 3 great colours including an "Aussie First" PLA Spoon Straw. There is now a compostable solution for the humble spoon straw, only available from Bygreen.

From the straight drinking straw in a variety of bore sizes, flexi straws and now a spoon straw, Bygreen offers the complete range.

PAPER STRAWS

FSC® CERTIFIED

The mark of
responsible forestry

This product is made of material from well managed, FSC®-certified forests and other controlled sources.

Our paper straws are made from a premium 3 ply food grade paper with no waxes, and only 0.6% food grade glue.

Made up of natural cellulose fibres that can be universally considered compostable and biodegradable.

Have lab test results meeting a pass for Council of Europe Resolution AP (2002) test for Heavy Metals and Chemicals, LFGB certification and also to FDA standards.

Are made in a factory holding BSCI certification, and are made to the highest standards including UV pasteurized before final packing.

Paper straws would be best considered for safety of our marine environment, as Plastic, Oxo-Bio, and even PLA still pose a threat to marine animals if they unfortunately enter this environment due to irresponsible humans, along with plastic bags, plastic and glass bottles, and other rubbish.

CPLA

Compostable Cutlery

CPLA – stands for Crystallised Poly Lactic Acid

CPLA, Crystallized Poly Lactic Acid, is a combination of PLA (70-80%), chalk (20-30%) and other biodegradable additives. Through the crystallization of PLA our CPLA products can withstand high temperatures up to 85°C without deforming. Once crystallized, CPLA is no longer transparent, but matt white – the natural colour of our cutlery.

As CPLA is derived from PLA, it is 100% biodegradable and compostable according to the EN-13432 standard and ASTM D6400 and or D6868. At the end of life, PLA based products can be either recycled or composted in industrial composting facilities.

The design of our CPLA cutlery makes it super strong. You will find our cutlery better than most on the market for usability, will not bend or flex when trying to eat.

Ask for a sample and test for yourself.

Available in 6.5" knife, Fork and Spoon, aswell as a Knife/Fork/Napkin Set wrapped in PLA Film, you can industrially compost our entire kit, including the packaging.

We also have a CPLA gelato spoon available and more items will follow soon.

BIO-BASED

This Bio-Based Spoon has the "OK-Biobased" conformity mark, and is assigned to class 4, meaning 80% <Biobased Carbon Content of the product <100%.

Made with approx. 80% corn starch or plant based polymers – balance plastic fillers for strength. This is not a Compostable Product, but a better alternative than 100% Plastic Spoons.

PALM LEAF TABLEWARE

ONE TREE

ECO FRIENDLY TABLEWARE

Sustainable, Beautiful, Energy Efficient and Food Safe

Sourced from Areca Nut Plantations, Areca trees shed roughly 8 to 10 leaves per year. The fallen leaves are taken back to the factory where they are washed under high pressure spring water. 80% of water used to clean the leaves is diverted back into production processes for reuse.

The shaping process involves the leaf pressed and heated to 180° C (also doubles as heat sterilization).

The pressed leaves are then checked, sent for edging and UV sterilization. The offcuts are used to make smaller bowls, so there is very little waste. Final scraps are used as compost to fertilize the same trees they fell from.

The tableware is then treated just prior to packaging using a Photohydroionization process. This non penetrating chemical free, ionizing UV radiation is a very effective food grade sanitation method.

Characteristics

- Palm leaf plates/bowls/platters are safe for Hot or Cold Liquids, do not go soggy with hot liquids, are strong and are easy to hold with the natural insulation of the leaf.
- Microwaveable – up to 2 mins
- Convention Oven at 180 degrees for up to 40mins – You can actually bake in them.
- So you can heat and serve.
- There is no taste transfer to food from the Palm Leaf
- Once Used – Simply return the plate to the earth as nature intended – 100% organic palm leaf plates are compostable and biodegradable.

ONE TREE

ECO FRIENDLY TABLEWARE

Add some "ONE TREE" flair to your food with our range of BURGER PICKS, FLAG PICKS and STEAK MARKERS.

Correctly identify your steak with colour coded paddles or our steak marker flags.

Promote your organic or gluten free produce, making safe choices for intolerant customers.

Custom printed flags are available (min order qty's apply). Just call our office for more information or ask your local distributor.

SKEWERS & CARNIVAL

FSC® CERTIFIED

The mark of responsible forestry

Bamboo skewers are made of material from well managed FSC®-certified forests.

This commercial range is perfect for loading with meat and vegetables for grilling or barbecuing. Hold your burgers together or create fantastic looking appetisers with our variety of skewers.

The carnival range is suited for fairy floss, dagwood dogs and curly potatoes.

The pointed ends make for easy skewering just about anything. Large variety of different lengths and diameters for different needs.
